- The world of amazement is open to choose from multiple material, designs & applications
- The premium company with an ISO 9001:2008 Certification and CE Marking
- State-of-the-Art digital printing facilities
- Products applicable to any smooth surface

Features of Materials

- **Polyvinyl Chloride film:** (**Lab testing certificate to be put*) PVC film is highly known for its characteristics of transparency, lustrous color, toughness, chemical resistance and easy process ability. We use PVC films outstandingly transparent, high quality shining surface, and the impact resistant . With excellent characteristics of vacuum formation, impact resistance and chemical resistance the film is good for interior graphics.
- **100 Micron film (1mm=1000 micron):** Optically clear film which is very helpful and most suitable material for Interior graphics. The film, with exciting graphical work on it, is easily applied on any wall, floor or at any smooth surface. The installed thin, strong and durable film gives you the feeling of the space itself instead of the feeling of a fixed material. The colors and the quality of the film do not deteriorate for years.
- **80 to 100 Micron lamination Film :** 80 to 100 Micron lamination film is used on every graphics to protect it from Sunlight & UV Light. The other exciting features of this lamination film are: High Quality Density & Water resistance.
- **Self Adhesive Material:** Self adhesive material is defined as the material having a surface coated with an adhesive that doesn't require any substance, such as glue or paste, to apply or to form a strong bond. The glue layer of the material provides adhesion of the film to the surface. This adhesives are produced at extremely low temperatures down to -700C, and that ensures the successful use of it in different season conditions and different climatic zones. This adhesives are produced to use it successfully in indoors.

Features of Materials

- **Metallic/Non-Metallic:** (**Photographs to be put*) The material used in interior graphics is metallic or non-metallic as per the requirement of the place as well as design and in accordance with the other materials applied. The simplest definition of metals is that they have overlapping conduction bands and valence bands in their electronic structure. The synthetic materials of metal often have the characteristic silvery-grey reflectiveness.

- **Reflective / Non-Reflective:** (**Photographs to be put*) We use reflective material i.e. the material that provides a reflection; capable of reflecting light or other radiation as well as non-reflective material i.e. the material without reflection; incapable of reflecting light or other radiation for interior graphics. The use of reflective or non-reflective elements is decided in reference to the place and requirements.

- **Matte/Satin Matte/Glossy:** The light reflective qualities of the final printed image of graphics play an important part in the decision of which material is to use for the project. In the reference of reflective surfaces there are choices like matte, satin and glossy.

Matte has a flat appearance as it doesn't reflect light and has no contrast qualities. Satin has shining qualities and is considered more reflective. Glossy material has the highest reflective qualities and is excellent for color definition and high contrast designs.

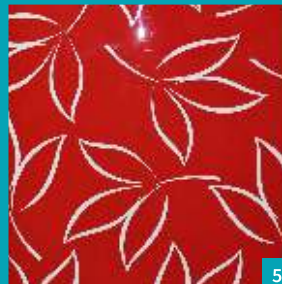

- **Glow in Dark:** Glow in dark is the phenomenon by which light is produced in a material using different tactics of radiation. Glow in dark gives a new dimension to the graphics. It is used as a low level light source without external energy sources. Such graphics are mainly used for spaces of interior, foot light, switch boards, signages, ceiling, discotheque, etc.

Application Types

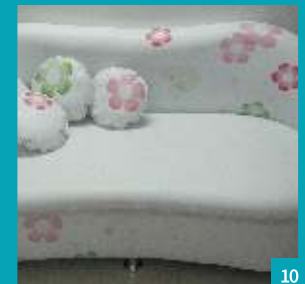

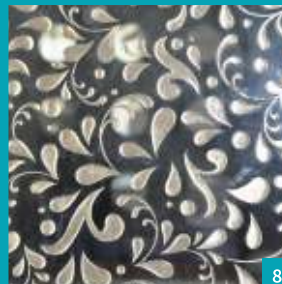

As there is always possibility to give a face-lift to any corner of residential and commercial built-up alike the newly constructing one, the applications list of interior graphics becomes endless. Some of them are wall, floor, ceiling, glass, sofa, curtains, laminates, bathroom, metals or any other smooth surfaces. We, BION, give far-reaching summits of perfection for the entire interior graphics product.

A range of places: BION produces interior graphics for smooth spaces for residential and commercial properties. The widest range of applications, varying the space, the material, is the key BION has been renowned for. We give you the creative and out-of-the-box solutions for almost everything when it comes to interior graphics.

CLIENT SERVICING

- Product presentation and explanation of application to the client or to the professional (interior designers and architects or others involved directly)
- We take inputs and ideas from either client or interior designers or architects and prepare the brief for our creative team
- With reference to the site (i.e. wall, glass, place, design concept etc.) application materials has to decide
- Once site is finalized we take the measurement and photography of the site
- Then, client or the professional needs to sign and approve the quotation
- An advance Payment is necessary and to be made by client or the professional
- A sales order is then released to start the work by assigned designing team

DESIGNING

- The conceptualization is the first and essential phase of Designing. We conceive the theme & start working on the project.
- It takes 7 to 10 days for first presentation to the client or the professional.
- Designer revise a few things if needed by the decision maker.
- After finalization of design, the designer works on the print of the design to finalize the dimensions for approval.
- Supervisor takes approval of the print out and verify the site measurements and surface where product is to be applied.
- The approval copy is sent to client to sign by the supervisor.
- With the reference of that signed approval designer makes the necessary changes for the production and send it to production department.

PRODUCTION

- Production Department comes in the action once the final and approved design is sent by the Designing Team.
- Production Department does the printing as per the requirement of the client and brief of Designing Team.
- The process of printing/ production takes to 4 days minimum.
- Every product needs at least 48 to 96 hours to dry and be ready for application.
- Once the production process of graphics is done, the materials go through the process of post-production.

POST-PRODUCTION

- Once the production is completed all the concerned persons who are concerned are informed for installation.
- Post-production processes vary material to material, some of the major course of actions are lifting, cutting, lamination, embossing, etc. The materials, after the production, needs the drying.
- The expert and experienced post production team of BION takes care of these processes. All the works of post production needs the meticulous approach of handling them, as recently produced materials are vulnerable for dust, color fading etc.
- As the materials, after the post-production process, goes directly for the pasting, the before checks are well taken care of.
- Post-production processes take 2 to 3 days depending on the size and materials.

INSTALLATION

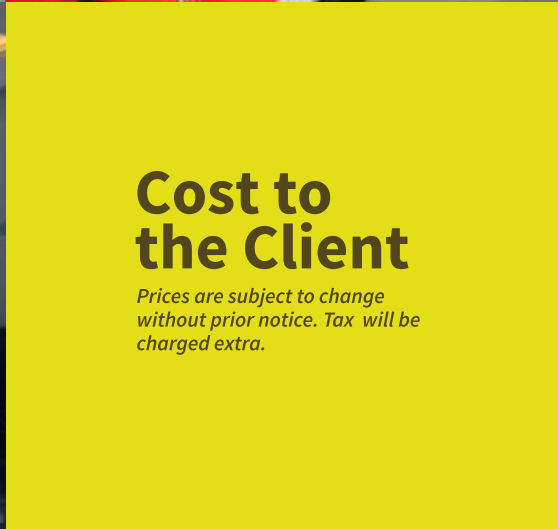

- Before going for installation we coordinate with the client or the professional regarding the readiness of the site and surfaces for installation.
- We suggest to the client to make the task of the other agencies like carpenter or painter etc complete beforehand as any dust or paint particles may ruin the graphics. This is necessary for longevity of interior graphics.
- If the site is not ready or any gap of communication occurs and if the installation team needs to return or to stay longer, the charges for transportation and accommodation are supposed to be paid by the client or the professional.
- Installation takes 1 to 2 day. It depends upon the site and application

PAYMENT & FEEDBACK

- Once installation is completed and at the time of receiving final payment, we take feedback from the client or professional.
- We also take photographs of the completed site for company purpose.
- These photographs are also shared with the client, professional, and the representative.

Cost to the Client

Prices are subject to change without prior notice. Tax will be charged extra.

Rs. 350 per sq.ft.
